Naman Taneja

Senior Technical Consultant | Data Engineering
Noida, India | +91 97189 76555 | er.namantaneja@gmail.com
LinkedIn | Portfolio: https://namantaneja167.github.io/MyPortfolio/

Professional Summary

Data engineer with almost 5 years of experience building and optimizing data pipelines for energy trading and pharmaceutical analytics. Hands-on experience with Snowflake, Azure, SQL, Python, and reporting automation. Responsibilities include technical delivery, production support, stakeholder communication, and mentoring, with additional experience in MLOps and practical AI tools.

Technical Skills

Data and Reporting: SQL, Python, C#, REST APIs, Snowflake, dbt Core, Databricks, ETL/ELT, Snowpipe, Dynamic Tables, data sharing, incremental processing, Azure Data Factory, Azure Functions, Azure Key Vault, Application Insights, Azure DevOps, CI/CD, Git, Dataiku DSS, Tableau, Tableau APIs, Power BI, Excel, Streamlit

MLOps and AI: MLflow, experiment tracking, model versioning, retrieval-augmented generation (RAG), AI agent orchestration, GitHub Copilot, Model Context Protocol (MCP)

Professional Experience

Uniper India GCC Noida, India
Senior Technical Consultant, Data Engineering *June 2025 – Present*

Support the North American trading data platform, covering energy trading and risk management (**ETRM**), market data, and financial reporting.

- Joined as the **first India-based data engineer** supporting the North American team. Took over and owned a vendor-delivered Azure and Snowflake platform, built internal knowledge of its code and deployment processes, and extended it with new data sources, pipelines, and operational tools.
- Lead the technical data pipeline work supporting the **Endur** launch, including Azure infrastructure, CI/CD pipelines, ingestion, validation, and monitoring. Worked with business and the data architect, who defined the business transformation rules.
- Architected and built an Azure Durable Functions framework to orchestrate dbt Core workflows on Snowflake, forming the backbone of market data processing and downstream transformations.
- Designed and developed C# Azure Function App for CXL data integration, building reusable CSV, JSON, XML, Excel, and ZIP converters to automate daily data processing workflows.
- Architected and implemented the Endur-to-Snowflake ingestion framework using C# and Python Azure Functions, automated Snowflake deployments, Snowpipe, and Dynamic Tables, incorporating schema validation, load verification, and operational alerts; reduced file synchronization time from approximately two hours to two minutes.
- Replaced legacy API-based ingestion with Snowflake data shares across multiple sources, including Wood Mackenzie/Genscape and Platts, using snow pipes, stored procedures and incremental Dynamic Tables that reduced refresh time from approximately 30 minutes to 1.5 minutes in production.
- Serve as **Scrum Master** and the India-based technical point of contact. Mentor a colleague through onboarding, code reviews, technical guidance, and task planning, and present technical updates and proposals to management.
- Automated scrum creation and work item management through custom GitHub Copilot skill connected to Azure DevOps through MCP. The team uses it to draft work items from development context, apply agreed naming, tags, and hierarchy, and create tickets after explicit review and approval. This saves approx. 2hrs per team member weekly.

ZS Associates Gurgaon, India

Business Solution Technical Associate *December 2022 – June 2025*

Delivered **data engineering** and reporting solutions for **Pfizer**, supporting global healthcare professional engagement analytics.

- Extended and maintained the Go-to-Market (GTM) reporting pipelines covering approximately 80–90 countries, more than **300** engagement KPIs, and over **1B+** records. Managed weekly refreshes, investigated data issues, and communicated findings to client stakeholders.
- Integrated healthcare professional interaction data across email, web analytics, virtual and face-to-face meetings, events, and messaging channels, including WeChat data for China.
- Improved Snowflake and Dataiku processing pipelines, reducing refresh time by approximately **25%**.
- Built the data pipelines for the Cockpit executive report from scratch, bringing together priority engagement KPIs and internal segmentation data across approximately 20 countries.
- Developed a reusable Tableau API utility to apply filters and export reporting data to CSV and Excel. Removed approximately **3–4 hours** of manual extraction work from the weekly reporting process.
- Built a Python utility to compare weekly variance results across 300+ KPIs, and flag changes beyond threshold for review.
- Developed an accepted internal **GenAI pilot** that retrieved KPI values from the generated Excel reports to assist with variance review. The work remained a pilot rather than a production reporting dependency.
- Presented reporting findings and data quality issues and strategic expansion of KPIs to client directors and senior directors in India and the US. **Mentored and lead 4 colleagues** in Pfizer across both projects.

Business Solution Technical Associate Intern *June 2022 – December 2022*

Supported **MLOps implementation** for **Novartis** across three brands, working on models that recommended the next engagement channel for healthcare professionals.

- Restructured Python notebooks in Databricks into smaller modules and centralized reusable functions so that common code could be shared across brands.
- Integrated MLflow for experiment tracking, metric logging, model registration, and versioning. Added timestamped and versioned model outputs and contributed to the team's data drift monitoring work.

Certification

SnowPro Associate: Platform — Snowflake
Issued May 2026

Education and Training

Guru Gobind Singh Indraprastha University Delhi

B.Tech, Computer Science *August 2018 – April 2022*

100x Engineers

Gen AI Engineer Apprenticeship *May 2024 – November 2024*
